AUTHOR: Saks, V. N., Corresponding Member AS USSR

TITLE: Problems of the Geology of the Arctic Region

PERIODICAL: Vestnik Akademii nauk SSSR, 1960, No. 6, pp. 106-108

TEXT: The author reports on the International Symposium on the Geology of the Arctic Region, which was held at Calgary (Canada) in January 1960. The Symposium was convened on the initiative of the Society of Petroleum Geologists of Alberta. About 800 geologists from Canada, USA, Norway, Denmark, Britain, and other countries attended. The Soviet delegation consisted of representatives of the Institut geologii Arktiki Ministerstva geologii i okhrany nedr SSSR (Institute of the Geology of the Arctic Region of the Ministry of Geology and Protection of Natural Resources of the USSR); F. G. Markov (Leader), M. I. Rabkin, and the author. The lectures delivered by Western scientists are mentioned in short. The Soviet delegates delivered lectures on the geology of the Pre-Cambrian, Paleozoic, Mesozoic, and Cenozoic of the Soviet Arctic Region, as well as its tectonics, the supremacy of Soviet science as

compared with that of other countries becoming evident. The Canadian Geological Service in Ottawa was visited on the return journey. The conception of the Hyperborean Platform introduced by N. S. Shatskiy, and the biostratigraphic zones of the northeast of the USSR by Yu. N. Popov are mentioned. There is 1 figure.

AUTHOR: Saks, Z.

TITLE: Dielectric properties of some ZnS electroluminescent substances

PERIODICAL: Referativnyy zhurnal, Fizika, no. 12, 1962, 78, abstract 12V530 ("Bull. Acad. polon. sci. Sér. sci. math., astron. et phys", no. 1, 1962, v. 10, 57 - 61, English; summary in Russian)

TEXT: Nudel'man and Matossi (Referativnyy zhurnal, Fizika, no. 2, 1957, 4979) discovered that the mechanisms of exciting electroluminescent blue and green bands of phosphors ZnS-Cu, Pb are different and independent. On the basis of measurings carried out on the capacitance of a series of samples of similar composition, the incorrectness of the stated point of view is shown in the work.

TITLE: Main technical characteristics of the "Tokamak-3" experimental thermonuclear installation

SOURCE: Atomnaya energiya, v. 17, no. 4, 1964, 287-294

TOPIC TAGS: thermonuclear pinch, thermonuclear fusion, plasma research, plasma pinch/ Tokomak-3

ABSTRACT: The "Tokamak-3" is intended for the investigation of a toroidal quasi-stationary discharge in the strong longitudinal magnetic field. The toroidal discharge is produced in the vacuum cham-

ber by a vortical electric field, and acts as an equivalent secondary turn of a pulse transformer. The produced plasma pinch is stabilized with a longitudinal magnetic field of a toroidal solenoid, inside which the vacuum chamber is located. The magnetic core of the pulse transformer carries the primary vortical-field winding, the demagnetization winding, and the winding for induction heating. The setup is fed from special power systems. The electromagnetic system, the power supply, and the vacuum system are described in some detail. The longitudinal field intensity reaches 40 kG. The vortical field values are 250 and 50 V per turn with pulse durations 10 and 50 milliseconds, and with programming of the waveform such as to maintain a constant current in the plasma pinch. The power supply delivers a peak power of 77,000 kW, maximum 7000 A, no-load voltage 11 kV, and stored energy 180 million Joules. The vortical field is fed from four capacitor banks rated 1000 μF at 20 kV, 11,000 μF at 10 kV, 78,000 μF at 5 kV, and 30,000 μF at 5 kV. The capacitor-bank parameters can be varied over a wide range. The vacuum in the liner does

TITLE: A method of testing hollow products for hermetic seal and for strength. Class 42, 188094 [announced by All-Union Scientific Research, Construction, and Engineering Institute of the Pipe Industry (Vsesoyuznyy nauchno-issledovatel'skiy i konstruktorsko-tekhnologicheskiy institut trubnoy promyshlennosti)]

SOURCE: Izobreteniya, promyshlennyye obraztsy, tovarnyye znaki, no. 21, 1966, 141

TOPIC TAGS: liquid gas container, liquid nitrogen, hermetic seal, pipe, static test, test method

ABSTRACT: This Author Certificate presents a method of testing hollow products for hermetic seal and for strength. The method involves filling a hollow product with water and connecting it to a working cylinder in which the necessary pressure is produced. To create high testing pressures, liquid gas, such as nitrogen, is introduced into the cylinder. This gas, while vaporizing, creates the necessary testing pressure. The intensity of this pressure depends on the amount of the introduced gas and on the rate of its vaporization. The working cylinder may be partly filled with water which forms an ice layer when some of the liquid gas is introduced. A

measured amount of liquid gas is then poured onto the ice layer. To create a testing pressure higher than 800 kg/cm$^2$, the working cylinder may be fully filled with liquid gas and then chilled by being submerged in a bath of the same liquid gas.

AUTHOR: Saksaganskiy, T.D., Engineer 28-58-3-3/39

TITLE: The Normalization of Parts and Components and the Specialization of Production in Machine Building (Normalizatsiya detaley i uzlov i spetsializatsiya proizvodstva v mashinostroyenii)

PERIODICAL: Standartizatsiya, 1958, Nr 3, pp 11-16 (USSR)

ABSTRACT: At present, machine building plants are compelled to produce all or nearly all machine parts, usually in small lots, which means at high cost. This statement is illustrated by examples. "Stroymashina" obtains only 6 tons of fasteners annually from outside (the required quantity is 28 tons), "Uralgidromash" (obtains 6 tons of fasteners and needs 53 tons), Turbomotornyy zavod (Turbo-Motor Plant) produces the entire required quantity of 100 tons of fasteners annually, at a cost 4-6 times over price list. The following plants are mentioned as starting normalization (or standardization). The Ural'skiy zavod tyazhëlogo mashinostroyeniya (Urals Heavy Machine Building Plant) uses 51% normalized and standardized parts. Sibirskiy zavod tyazhëlogo mashinostroyeniya (Siberian Heavy-Machine Building Plant) has unified parts and major components of heavy cranes (75 to 250 ton lifting capacity); any crane can

The Normalization of Parts and Components and the Specialization of Production in Machine Building

now be composed of these unified parts; L'vovskiy avtozavod (L'vov Automobile Plant) has started production of a 5-ton lift truck "4003", 85% of which is made from unified and normalized parts of the "GAS-51" and "ZIL-150" automobiles and the 3-ton loader "4000 M" - at one third of the cost of the old design. The article gives detailed information on the plan for normalization of machine parts developed by the Laboratoriya standartizatsii VNII Komiteta standartov, mer i izmeritel'nykh priborov (Standardization Laboratory of the VNII of Committee of Standards, Measures and Measuring Devices). This plan has been sent to 18 Sovnarkhozes to obtain information on the requirements. The normalization project establishes 7 classes: "A" - "Components and Parts for Transmission of Motion, Their Supports and Connections"; "B" - "Fastenings" (with adjusting rings, cramps, and like members added to the common fasteners); "V" - "Components and Parts of Control Arrangements"; "G" - "Fittings and Apparatuses for Hydraulic, Pneumatic and Lubricating Equipment"; "D" - "Electro-Commutation" (control boards, boxes, etc.) "E" - "Control Device Parts of Plastics"; "Zh" - "Units for the Care of Machines" (to be supplied with ready machines). The de-

Korobeynikov, Vitaliy Grigor'yevich, Boris Aleksandrovich Sak-Shak, and Yuriy Leonidovich Tetelyutin

Avtomatizatsiya universal'nykh metallorezhushchikh stankov (Automation of Universal Metal-Cutting Machine Tools) Moscow, Mashgiz, 1960. 157 p. 15,000 copies printed.

Ed.: Yu. S. Sharin; Tech. Ed.: N.A. Dugina; Scientific Ed. of Ural-Siberian Department (Mashgiz): G.A. Sarafannikova.

PURPOSE: This book is intended for technical personnel.

COVERAGE: Information concerning the automation of metal-cutting machines is given. Included are descriptions of modernized lathes, milling machines, and drilling machines. Automation schematics are given, and devices for feeding and chucking are described along with continuous production lines consisting of semi-automatic and automatic machine tools. The following are mentioned as having been the originators of automation in Soviet machine plants: T.G. Levin, Yu.L. Tetelyutin, V.F. Savat'yev, V.G. Korobeynikov, and V.S. Pis'menskiy. There are no references.

USSR/Medicine - Blood Substitute

"Experimental Use of a Nonspecific-Type Blood Serum in a Surgical Clinic," Cand E.F. Saksen, Cand Med Sci, Hosp Surg Clinic, Med Faculty, 2 Moscow Med Inst Stalin Khirurg, No 11, pp 55-59 -1952

Describes clinical cases in which a nonspecific-type serum obtained from the processed blood plasma of animals was introduced by drip method to patients in lieu of a blood replacement. Some cases of severe reaction observed at the first penetration of the heterogeneous agent decreased with repeated transfusions. The drip method eliminated the visible reaction observed when the serum was introduced at a rate exceeding 2-3 ml per min. Advocates the use of this serum in cases requiring a replenishment of the blood supply, but warns against its use in active cases of pulmonary tuberculosis or in the presence of a possible allergy. Suggests a thorough anamnesis prior to the transfusion. Source #264T36
